## PRESS RELEASE

Markham, ON Canada, April 20, 2006 – The recently announced acquisition by Computer Associates of Cybermation is an occasion for MVS Solutions Inc. to affirm the positioning of ThruPut Manager® 6 Automation Edition (TM-AE). Regardless of which batch job scheduler is in use, TM-AE is the most comprehensive, all-encompassing batch workload automation solution for the z/OS JES2 platform.

ThruPut Manager 6 Automation Edition provides the technology to meet batch service requirements as defined in your corporate Service Level Agreements. Driven by simple management policies, it's powerful automation algorithms continually monitor critical path and due-out times, system load, batch queues and individual job performance. It uses the best of existing task automation provided by Tape Mount Automation devices, Workload Manager, traditional Job Schedulers, and ThruPut Manager's own Standard Edition services.

“ThruPut Manager's Automation Edition is the most complete strategic solution to manage batch as can be created.” says Jose Danobeitia, President and Chief Technology Architect of MVS Solutions Inc. Through it's automation of the total end-to-end JES2 batch service, TM-AE will substantially outperform anything that can be done indirectly through present means.

ThruPut Manager 6 Automation Edition provides specialized management for scheduled batch workload. It's TM/Production Control Services™ interfaces with your job scheduler to carry it's scheduling goals into the z/OS execution realm and deliver your production on time. Support for CA-7® will be available October 2006 with support for other schedulers to follow.

CA's acquisition of Cybermation ESP® in no way effects the positioning of TM-AE. As CA-7 evolves and/or integrates with other CA scheduling products in the long term, ThruPut Manager will support it. ThruPut Manager 6 Automation Edition will continue to be a necessary enhancement to traditional job schedulers and the only solution for total automation of z/OS JES2 batch service.

MVS Solutions Inc., incorporated in 1987, is a Canadian corporation involved in the development, sales and support of system software, specifically for IBM's z/OS operating systems with JES2.
