MVS Solutions Inc. Announces Cost-Saving Enhancements to ThruPut Manager AE

MVS Solutions Inc. is pleased to announce further enhancements to the existing capacity management facilities of **ThruPut Manager AE** (Automation Edition). Where sub-capacity pricing is used, these new facilities will result in substantial datacenter savings of monthly software fees for operating systems, database and other software.

With sub-capacity pricing every installation's goal is to reduce the monthly peak value of their four-hour rolling average CPU utilization. Since that peak determines the charges for applicable software, the lower the monthly peak, the lower the monthly charges.

ThruPut Manager AE continuously monitors the four-hour rolling average and, as a peak approaches, it starts to constrain lower importance batch work. This reduces the average utilization and allows the available capacity to be used for online and mission-critical batch work.

ThruPut Manager AE is ideally positioned to offer this facility using its existing dynamic initiator management, sophisticated workload distribution, and prioritization of work based on business importance, urgency and available resources. Now **ThruPut Manager AE** adds the current value of the four-hour rolling average to its considerations.

"With these new facilities the savings for our customers may be substantial. We estimate one intermediate-sized customer already using sub-capacity pricing could save \$60,000 per month across all their systems," reports Jose Danobeitia, President and Chief Technology Architect of MVS Solutions Inc.

This facility delays lower importance batch work only as necessary so the datacenter saves money while still delivering service. These features are implemented by using the existing **ThruPut Manager AE** policy setup dialog. As is usual with **ThruPut Manager** functionality, the changes are transparent to users and require no changes to JCL.

ThruPut Manager AE is the leader in end-to-end batch automation. It provides the most comprehensive strategic solution to manage batch and demonstrates MVS Solutions' continuing commitment to batch automation solutions for z/OS.

About MVS Solutions Inc.

MVS Solutions Inc., founded in 1987 and headquartered in Toronto, Canada, provides software solutions for batch service automation in a z/OS JES2 and Workload Manager environment. The company is privately held and the principals have been actively involved in its operation from its inception. Additional information is available at www.mvssol.com.
